

How Natural Cleaning Products Work!

There are five basic ingredients that can also be used as alternatives to hazardous cleaning products commonly found in the home. These ingredients are baking soda, pure soap, white vinegar, borax, and washing soda. Baking soda is an excellent scouring powder, deodorizer, and water softener. Pure soap decomposes naturally in the environment and can be found in liquid, bar, powder, or flake form. White vinegar deodorizes and cuts grime and grease. Borax disinfects, cleans, and softens water. Washing soda removes stains, disinfects, and cuts grease.

See our index below to find a recipe and you will be on your way to saving money and detoxifying your world.

Chemical Toxic Free Degreaser

Sick of smearing toxins around your house while wearing rubber gloves, a mask and safety goggles as suggested by many cleaning manufactures. Well now you can *clean naked*, because our degreaser won't cause you to go blind, be poisoned or burn your skin off. We can't promise the neighbors won't complain though.

Chemical Toxic Free Degreaser

4 Cups Tap water

¼ Cup Washing Soda

10 ml (approx) Lemon Juice

Pour the water into a bowl. Slowly stir in the washing soda and then add the lemon juice. Yum.
